HARPS mapping controls: improvement depends on spectral order
All 72 orders in each of 21 M-selected exposures
Median correlation across exposures
Native order index (0-based)
Original Pearson
Original Pearson: 10–90% range
Fixed winsorized diagnostic
The 28 previously failed exposure/order references
Winsorized Pearson median (diagnostic)
Original Pearson median
Failed references: orders 1–52
Failed references: orders 66–70
Unchanged correlation
Descriptive posthoc sample · Fixed coordinates and original gates · All 35 mapping-limited records remain M
